ford explorer: where is the heater blend actuator located on

The blend door actuator in a late model Ford Heater is an electric motor with position feedback. It opens and closes the blend door to provide the requested air temperature. The blend door actuator is controlled by the HVAC controller. The controller provides + and - voltage to the blend door motor and reverses the voltage to move the motor in the opposite direction.

Fix Ford heater no heat — Ricks Free Auto Repair Advice ...

A blend door actuator is made up of an electric motor that turns a plastic gear set in one direction or another which is connected to an air control door pivot at the final drive of the unit. An actuator can go bad in of two ways; first the electric motor can burn out rendering the unit non-responsive so nothing changes when the temperature or vent mode controls are moved.
