2008 Ford Expedition
Heater Core | Advance
Auto Parts
Expedition No Heat:
How the Heater Works
At the simplest level
possible, the heater works

Download Ebook 2008

by passing hot coolant from the engine into a tiny radiator called the heater core. At this point, the blower motor blows air across the it and the newly heated air blows on to the driver and passengers.

Ford Expedition : Heater
Not Working Diagnosis

...

Download Ebook 2008

Step 1. Disconnect the Expedition's power supply before working on the heating system by unplugging the negative battery cable. Drain the cooling system, removing the drain plug at the radiator and then the engine block, letting the coolant pour into a clean container.

with the engine 's cooling system to provide heated air for the passenger cabin. The heater core is a small radiator mounted in the passenger side of the dash. Heated engine coolant travels from the engine through a heater hose to the core. Air is blown across the core by the heater fan. This heated air is then directed
