Life starts right as the central yolk splits in two. It then divides into four, then eight, etc.- until it looks a bit like a raspberry inside a jello cup. Soon, the embryo starts to look more and more like a tadpole, getting longer and moving about in it's egg. Usually, about 6-21 days (average!) after being fertilized, the egg will hatch.

[Life Cycle of a Frog](#)

White's tree frogs (*Litoria caerulea*) commonly live to 16 years when kept indoors, the oldest known specimen living to 21 years. The life span of a tree frog in the wild is much shorter. The most common indoor pet, the red-eyed tree frog (*Agalychnis callidryas*), averages only 5 years in the wild like other frog species.

[A Frogs Life Time For Kids Nonfiction Readers](#)

The life cycle of a frog, known as metamorphosis, is the transition of a tadpole to an adult frog. The life cycle starts with an egg, which hatches into a tadpole, the tadpole eventually gains hind and front legs, turns into a froglet as it begins to leave the water, then eventually turning into an adult frog. As far as amphibians go, frogs are the most abundant amphibians in the world.

[Life Cycle Of A Frog: From Tadpole To Frog | Science Trends](#)

At approximately 12 weeks of age, the tadpole's gills and tail have been fully absorbed into the body, meaning that the frog has reached the adult stage of its life cycle. It is now ready to venture out onto dry land and, in time, repeat the life cycle.

A year in the life...Spring Adult frogs emerge from their overwintering sites in early spring and head straight to a pond to breed; frogs reach breeding age at 2-3 years old. Males have a single vocal sac under the chin and may ' piggy back ' to the pond on a female.

[Common Frog - Froglife](#)

It is when the humidity is high or when it rains or in the evenings that they move about. The frogs stay out of the deep lake until they are ready to hide themselves and hibernate, fearing the starving fish that will happily feed on them. Frogs which are out of their hibernation early, stay on shore along the vegetation.

[Where do frogs live? - FrogLife Cycle](#)

A frog is any member of a diverse and largely carnivorous group of short-bodied, tailless amphibians composing the order Anura (literally without tail in Ancient Greek).The oldest fossil "proto-frog" appeared in the early Triassic of Madagascar, but molecular clock dating suggests their origins may extend further back to the Permian, 265 million years ago. ...
