## ~~Abortion in sheep—consider vaccination now to prevent ...~~

Toxoplasmosis is an important infectious disease of sheep and humans that may result in abortion, stillbirth or foetuses born with congenital infection. The disease is caused by *Toxoplasma gondii*, one of the most successful parasites worldwide, as it can infect all warm blooded animals. It is very small, consisting only of a single cell and is transmitted through ingestion of oocysts shed by infected cats or by the consumption of undercooked infected meat with cysts containing bradyzoites.

## ~~Toxoplasmosis | Moredun Group~~

Enzootic abortion of ewes, *Toxoplasma gondii* and *Campylobacter* species cause over 70 per cent of abortion outbreaks in the UK. Chlamydial abortion, *Chlamydia abortus*, enzootic abortion of ewes (EAE) Pregnant women are at serious risk from *C. abortus* infection (zoonotic infection). Despite the availability of a highly efficacious vaccine, EAE is still the main cause of ovine abortion in the UK.

## ~~NADIS—National Animal Disease Information Service~~

Toxoplasmosis is only a risk to an unborn baby if caught for the first time during pregnancy or within a few weeks before you get pregnant. If an unborn baby catches the disease they are said to have "congenital toxoplasmosis". The damage the infection may cause will depend on when in pregnancy you got the infection.

## ~~Toxoplasmosis in pregnancy | Tommy's~~

Toxoplasmosis is a common infection that is usually harmless. But if you get toxoplasmosis for the first time while you're pregnant, or a few weeks before you conceive, there's a small risk the infection could cause miscarriage, stillbirth, and birth defects or problems after the baby is born — this is very rare.
