Activity level is a number used to express how physically active someone ' s lifestyle is. It is derived by dividing total energy expenditure by basal metabolic rate and is typically between 1.4 and 2.1. Most people will never know their physical activity level with any accuracy because calculating it requires sophisticated laboratory techniques.

What is Activity Level and How Does It Affect Calorie Needs

Ready for fractions? This coloring math worksheet introduces children to fractional parts by asking them to color in 1/2 or 1/4 of familiar shapes. Example: Your BMR is 1339 calories per day and your activity level is moderately active (work out 3-4 times per week). Your activity factor is 1.55 and your TDEE is $1.55 \times 1339 = 2075$ calories per day. This is the total calories you could eat everyday if you wanted to maintain your weight. If you want to lose weight, you would either have to ...

Physical Activity and Controlling Weight

Complete your daily Stand goal by standing up and moving around for at least 1 minute during 12 different hours in the day. Even if you stand all day, you still need to move around. If you specify that you use a wheelchair, the Stand ring switches to the Roll ring. Roll shows hours in which you 've pushed around for at least 1 minute.
