While recent EU Rural Development policy clearly recognises the economic, ecological, and social advantages of agroforestry systems, to date the implementation of such systems remains poor throughout most of Europe. In light of this, this collection of peer-reviewed papers brings together some of the most important current research in European agroforestry, and evaluates the current scope and future potential of agroforestry across the EU.

[Agroforestry in Europe: Current Status and Future](#) ...

Abstract. Agroforestry is a multifunctional, environmentally-friendly and modern system of land use by which we can reach economic, environmental and social benefits for the society. Bulgaria has achieved good results in the establishment of agroforestry practices, such as: protective forest belts, forest farming (agricultural use of forest areas), silvopasture (forest-grassland complexes).

Current extent and trends of agroforestry in the EU27. This report (updated in August 2016) is an output from work-package 1 which aims to understand the context and extent of agroforestry in Europe. In an earlier report, den Herder et al (2015) reviewed literature sources to provide a preliminary estimate of the extent of agroforestry in Europe. That report (which collected only limited data from some countries) estimated that agroforestry extends to at least 10.6 million hectares in Europe.
