Domestic-sized air conditioning systems are also available in different levels of complexity: Simple systems designed for a single room application will have one outdoor unit and one indoor unit. These are known as single room air conditioners; The next option is a split air conditioner which is one outdoor unit with two, three or four indoor units. They are all on or all off, and will either all be in heating or cooling mode.

Air Conditioning: Options for the Home | Homebuilding

In more temperate climates, you can turn the air conditioner off at night and let ceiling or floor fans provide do all the work. The energy used by fans is far less than that of air conditioners. If you live in a warmer climate, fans can still provide a comfortable breeze at night and may allow you to set the air conditioner above 78 degrees saving a great deal of energy.

Air Conditioning Residential Best Practice Guideline

Single-room air conditioners work best when kept out of direct sunlight. Avoid installing these devices in a southwest-facing window if possible. Be sure the vents aren't blocked by furniture, curtains or rugs, all of which can cut down on air flow. Vent deflectors can help direct and increase the spread of cooled air if you have central air and floor vents. A whole-house effort
