~~Age word problems | Systems of linear equations (practice ...~~

When solving age problems, you need to represent the following in terms of a variable: - the present ages of the people or things involved - the age, at the other specified time, of the people or things involved Then, form an equation based on these representations.

~~Lesson Solving Age Problems — Algebra~~

Objective: Solve age problems by creating and solving a linear equation. An application of linear equations is what are called age problems. When we are solving age problems we generally will be comparing the age of two people both now and in the future (or past). Using the clues given in the problem we will be working to find their current age. There can be a lot of information in these problems and we can easily get lost in all the information.

~~101 PROBLEMS IN ALGEBRA — mathematics books~~

First, I'll need to name things and translate the English into math. Since my age was defined in terms of Will's, I'll start with a variable for Will's age. To make it easy for me to remember the meaning of the variable, I will pick W to stand for "Will's age at the start, in the year 2000". Then Will's age in 2009, being nine years later, will be $W + 9$.
