An accessible treatment of linear programming introduces students to one of the greatest achievements in algorithms. An optional chapter on the quantum algorithm for factoring provides a unique peephole into this exciting topic. In addition to the text, DasGupta also offers a Solutions Manual, which is available on the Online Learning Center.

The rst question is moot here, as this algorithm is precisely Fibonacci's denition of F_n . But the second demands an answer. Let $T(n)$ be the number of computer steps needed to $n..$ And 01

$\text{dist}(s) = 0$ for each $v \in V$, in linearized order: $\text{dist}(v) = \min(u \in V, \text{dist}(u) + l(u,v))$ Notice that this algorithm is solving a collection of subproblems, $\text{dist}(u) : u \in V$. We start with the smallest of them, $\text{dist}(s)$, since we immediately know its answer to be 0. We
