## Alkyne Reaction Practice Problems for Organic Chemistry

Borane ( $\text{BH}_3$ ) and alkyl boranes ( $\text{R}_2\text{BH}$ ) add to alkynes in the same way as they do with alkenes. The reaction starts with the hydroboration of the alkyne followed by the oxidation with hydrogen peroxide and sodium hydroxide: Just like for the alkenes, the OH group is placed on the less substituted carbon. However, this time an enol is formed which quickly rearranges into the corresponding ...

Reactions of alkynes with oxidizing agents such as potassium permanganate and ozone usually result in cleavage of the triple-bond to give carboxylic acid products. A general equation for this kind of transformation follows. The symbol [O] is often used in a general way to denote an oxidation.  $RC \equiv CR' + [O] \longrightarrow RCO_2H + R'CO_2H$

## Addition Reactions of Alkynes - Michigan State University

- Like alkenes, alkynes undergo addition reactions because they contain relatively weak  $\pi$  bonds.
- Two sequential reactions can take place: addition of one equivalent of reagent forms an alkene, which can then add a second equivalent
