signal is created by a random number generator, hence the name “random”. The exciter motion is actually just a broadband vibration having a frequency-based shaping and an overall vibration level that is indicative of some real-world vibration (such as a test track or regular road).

On the other hand, random vibration is composed of a multitude of frequencies. In fact, random vibration is composed of a continuous spectrum of frequencies. Random vibration is somewhat analogous to white light. White light can be passed through a prism to reveal a continuous spectrum of colors. Likewise, random vibration can be passed
