A textile is a flexible material made by creating an interlocking network of yarns or threads, which are produced by spinning raw fibres into long and twisted lengths. Textiles are then formed by weaving, knitting, crocheting, knotting, tating, felting, or braiding these yarns together. The related words "fabric" and "cloth" and "material" are often used in textile assembly trades as synonyms for textile. However, there are subtle differences in these terms in specialized usage. A textile is an

through to dyeing, printing and finishing. On completion of the two-day course, you'll have a better understanding of the products you are working with be it in fabric production, garments and accessories and household textiles.

## **Introduction to textile technology | School of Design ...**

The word "textile" was originally used to define a woven fabric and the processes involved in weaving. Textile refers to any material made of interlacing fibers or Yarns. The yarn is produced by spinning raw fibers of wool, flax, cotton, or other material to produce long strands. Textiles are formed by weaving, knitting, crocheting, knotting, or pressing fibers together (felt).
