Top 3 Apache Spark Tutorials For Machine Learning Beginners!
Apache Spark is a cluster computing framework designed for fast and efficient computation. It can handle millions of data points with a relatively low amount of computing power. Apache Spark is built on top of and is an extension of Hadoop's Map-Reduce, which efficiently uses different combinations of cluster computing.

In the spirit of Spark and Spark MLlib, it provides easy-to-use APIs that enable deep learning in very few lines of code. It focuses on ease of use and integration, without sacrificing performance. It's build by the creators of Apache Spark (which are also the main contributors) so it's more likely for it to be merged as an official API than others.

The focus of Machine Learning with Apache Spark is to help us answer these questions in a hands-on manner. We introduce the latest scalable technologies to help us manage and process big data. We then introduce advanced analytical algorithms applied to real-world use cases in order to uncover patterns, derive actionable insights, and learn from this big data.

Apache Spark is an open source analytics framework for large-scale data processing with capabilities for streaming, SQL, machine learning, and graph processing. Apache Spark is important to learn because its ease of use and extreme processing speeds enable efficient and scalable real-time data analysis.
