Note that these are also documented in the Developer Guide. `velocimacro.library.path`

- A comma-separated list of all

Velocimacro template libraries. By

default, Velocity looks for a single library:

`velocimacros.vtl` (since 2.1 ; and if not

found it will also look at the old default

`VM_global_library.vm`). The configured

template path is used to find the

Velocimacro libraries.

In Velocity, there are three sources for variables, searched in a specific order. The value stack. The action context. Built-in variables. Since the action context is resolved after the value stack, you can reference the variable without the typical preceding marker (#) that has to be used with the JSP `s:property` tag. Omitting the marker can be convenient, but it can also trip you up, if used carelessly.
