The four basic arithmetic operators are: add (+), subtract (-), multiply (\times) and divide (\div)

For addition and subtraction, when unlike signs are together in a calculation, the overall sign is negative. Thus, adding minus 4 to 3 is $3 + (-4)$ and becomes $3 - 4 = -1$. Like signs together give an overall positive sign. Thus subtracting minus 4 from 3 is $3 - (-4)$ and becomes $3 + 4 = 7$. For multiplication and division, when the numbers have unlike signs, the answer is negative, but when the numbers have like signs the answer is positive.

Applied Mathematics for Science and Engineering | Wiley

In the various engineering fields, different forms of math may be applied to achieve a specific solution. For instance, linear algebra is widely applied in electrical engineering to design electrical circuits. Boolean algebra is the basis of digital logic design, a key component of building computers. In civil and mechanical engineering, geometry is used to design structures and ensure that they perform in a safe and meaningful way.
