To use buttons and switches with your Arduino, you

have to use a pull-up or pull-down resistor. pinMode

(pin, INPUT\_PULLUP); enables the internal pull-up

resistors of the Arduino. digitalWrite (pin, HIGH); on

an input pin has the same result. digitalRead (pin)

returns the state of the input pin 1 = 5v, 0 = 0v.

system that allows you to write sketches (synonym for  
program in Arduino language) for different Arduino  
boards. The Arduino programming language is based on  
a very simple hardware programming language called  
processing, which is similar to the C language. After  
the sketch is written in the Arduino IDE, it should be  
uploaded on the Arduino board for execution. The first  
step in programming the Arduino board is downloading
