1 Why Study Automata Theory? 2 Languages and Strings 1) Consider the language $L = \{1^n 2^n : n > 0\}$. Is the string 122 in L ? No. Every string in L must have the same number of 1s as 2s. 2) Let $L_1 = \{a^n b^n : n > 0\}$. Let $L_2 = \{c^n : n > 0\}$. For each of the following strings, state whether or not it is an element of $L_1 L_2$: a) ϵ . No. b ...

Automata theory is the study of abstract machines and automata, as well as the computational problems that can be solved using them. It is a theory in theoretical computer science. The word automata comes from the Greek word αὐτοματίζω, which means "self-making". The figure at right illustrates a finite-state machine, which belongs to a well-known type of automaton. This automaton consists of states and transitions. As the automaton sees a symbol of input, it makes a transition to ...

Nondeterministic finite automaton (N FA) or nondeterministic finite state machine is a finite state machine where from each state and a given input symbol the automaton may jump into several possible next states. This distinguishes it from the deterministic finite automaton (DF A), where the next possible state is uniquely determined.

A automata theory is a simple idealized machines used to recognize patterns within input taken from some character set (or alphabet) C. The job of an finite automata is to accept or reject an input depending on whether the pattern defined by the FA occurs in the input.
