Nuclear equations are used communicate about natural radioactive decay and other nuclear events such as fission, fusion, and transmutation. All nuclear equations follow a simple pair of rules. First, the sum of all atomic numbers on one side of the equation must equal the sum of all atomic numbers on the other side of the equation.

Balancing Nuclear Reaction Equations Pogil Answers

A balanced nuclear reaction equation indicates that there is a rearrangement during a nuclear reaction, but of subatomic particles rather than atoms. Nuclear reactions also follow conservation laws, and they are balanced in two ways: The sum of the mass numbers of the reactants equals the sum of the mass numbers of the products.

21.2 Nuclear Equations – Chemistry

A balanced nuclear equation is one where the sum of the mass numbers (the top number in notation) and the sum of the atomic numbers balance on either side of an equation. Nuclear equation problems will often be given such that one particle is missing. Instead of using the full equations, in many situations a compact notation is used to describe nuclear reactions. Key Terms. baryon: A heavy subatomic particle created by the binding of quarks by gluons; a hadron containing three quarks. They ...
