The electrical energy consumed in a circuit is the loss of electrical potential energy in maintaining current in the circuit. Thus in the figure above, as the charge q ($= It$) moves from point A to B, it loses electric potential energy $= qV = V/ t$ joules. This loss of electric potential energy is converted into heat.

This voltage drop principle leads to another important law in basic electrical engineering, Kirchoff ' s Voltage Law (KVL). This law states that the algebraic sum of the voltages in a closed loop is always equal to zero. If we only knew the supply potential and the voltage drop of R1, we could use KVL to find the other voltage drop.
