Big Data: Beyond the Hype

Big data technologies describe a new generation of technologies and architectures, designed to economically extract value from very large volumes of a wide variety of data, by enabling high-velocity capture, discovery, and/or analysis.¹ This definition incorporates all types of data (e.g., real-time, analytic) managed by nextgeneration systems that must scale to handle constantly increasing user workloads and data volume.

While there remains much work to be done, we are cautiously optimistic that we might soon be past the “peak of inflated expectations”, and the “trough of disillusionment” in the so-called “hype cycle” for big data . As this pervasive mega-trend touches off a variety of new technologies and approaches, the foundational work on validity, data sharing, generalizability, and ethical principles described in this special issue will continue to resonate for

Beyond the Hype of Big Data
| CIO

While Big Data is clearly a key business priority that is expected to add significant value to organisations, it has also become difficult to get beyond the hype. At Northdoor, we believe that Big Data is simply a natural progression of how organisations access, analyse and use information for the running of their businesses.

Hype

First, a quick primer on Big Data: This much-used jargon refers to a set of technologies designed for working with large volumes of data beyond those of traditional database management systems. These inventions stem from the needs, in the early part of the last decade, of Internet companies like Google, Yahoo and Facebook to manage user data and systems at a scale the industry hadn't previously designed for.
