The biomechanics of the lumbar spine are related to the functional anatomy. The disparate functional mechanical requirements of the spine, support, mobility, housing, protection and control are reviewed. Typical forces one applies to the spine in activities of daily living as well as in mechanical overloads are discussed.

Biomechanics of the Spine. The Disc. • The interaction of the anterior and posterior lumbar spinal columns is critical for normal physiologic function, load transmission, and kinematics • Lumbar range of motion varies between vertebral levels and individuals • As the vertebral body rotates anteriorly, the anterior annulus is compressed • As rotation occurs, the weight of the upper body and trunk lead to shear strain forces at the disc and slight translation.

the vertical axis runs from the center of C2 to the anterior border of T7 to the middle of the T12/L1 disc, posterior to the L3 vertebral body, and crosses the posterior superior corner of the sacrum. on radiograph this is estimated by a plumb line dropped from the center of C7 to the posterior-superior corner of S1

About 75% of all spinal flexion below the neck occurs in the lumbar spine, and about 70% of all lumbar flexion occurs at the lumbosacral joint. Normally, the degree of lumbar flexion is up to and only slightly over the flattening of normal lordosis, thus total possible flexion must be achieved by hip rotation.

CHAPTER 6: GENERAL SPINAL BIOMECHANICS

Biomechanics, the application of mechanical principles to living organisms, helps us to understand how all the bony and soft spinal components contribute individually and together to ensure spinal stability, and how traumas, tumours and degenerative disorders exert destabilizing effects.

spine biomechanics. The material is organized in three main areas—the Whole Spine, the Functional Spinal Unit, and the Spinal Components (e.g. vertebra, intervertebral disc, spinal ligaments). My approach will be to briefly review what we knew in 1990, to outline what we have learned since that time, and to suggest areas for future research.
