method, it is very slow. Relative to other methods that help you identify the square root of an equation, the Bisection method is extremely slow.

Bisection Method Pros and Cons List | NYLN.org

Bisection method has following demerits: Slow Rate of Convergence: Although convergence of Bisection method is guaranteed, it is generally slow. Choosing one guess close to root has no advantage: Choosing one guess close to the root may result in requiring many iterations to converge.

Interval or Binary Search method has following merits or benefits: Convergence is guaranteed: Bisection method is bracketing method and it is always convergent. Error can be controlled: In Bisection method, increasing number of iteration always yields more accurate root.

Advantages of bisection method a) The bisection method is always convergent. Since the method brackets the root, the method is guaranteed to converge. b) As iterations are conducted, the interval gets halved. So one can guarantee the error in the solution of the equation.

Drawbacks of bisection method
a) The convergence of the bisection method is slow as it is simply based on halving the interval.
b) If one of the initial guesses is closer to the root, it will take larger number of iterations to reach the root.
c) If a function $f(x)$ is such that it just touches the x -axis (Figure 6) such as $f(x) = x^2$

Drawbacks of bisection method - University of South Florida

I guess the only disadvantage of the Bisection method is its low rate of convergence. This is why it is not used widely despite its robustness and simplicity. For continuous functions, Bisection method is guaranteed to converge whereas Newton Raphson technique in many cases will not even converge.

Advantages of secant method: 1. It converges at faster than a linear rate, so that it is more rapidly convergent than the bisection method. 2. It does not require use of the derivative of the function, something that is not available in a number of applications. 3. It requires only one function evaluation per iteration,
