Blockchain technology offers a decentralized consensus mechanism using networked servers that facilitate peer-to-peer transactions without the need for a centralized authority to maintain the information generated by the transactions. Each transaction is validated and combined in a group of validated transactions, to create a new "block" in an existing chain of transactions, hence the name "blockchain."

Blockchain, Smart Contracts and the Law
In contrast to less detailed and narrower previous publications on the subject, 2 Blockchain and the Law considers the challenges and opportunities of a blockchain-based future in the broad context of the current institutional, legal, political, economic, social, and cultural frameworks, which both shape and struggle to contain the technology. The book is keenly aware of the scope and depth of potential conflicts that would be enabled by widespread blockchain adoption.
