Give a definition of a buffer: A buffer is a solution containing either a weak acid and its salt or a weak base and its salt, which is resistant to changes in pH. (chemistry.about.com) If you...

Pre-lab Questions - Household Product Buffers

Give a definition of a buffer. A buffer is a solution of a weak acid-base pair that resists change in pH. If you titrate acetic acid with sodium hydroxide, the resulting products are the acetate ion, the sodium ion, and water (see Figure 1). At a certain point, the reaction mixture contains acetic acid (the weak acid) and acetate ion (its conjugate base) in solution, producing a buffer effect.

Pre-lab Questions - Buffering Household Products

Buffers are solutions that resist changes in pH when acids or bases are added. In order to accomplish this, a buffer must contain both an acidic and a basic component. These two components should...

Pre-lab Questions - Household Products and Buffers!

Household Products and Buffers! Many household products contain buffering chemicals such as citric acid, sodium benzoate, and phosphates or phosphoric acid. The lab begins with an introductory... 14-Lab 14 - Buffers in Household Products - Google Docs Results (Cont.) Alka-Seltzer initial pH: 6.59 Tomato Paste initial pH: 4.30 acid, solid

Buffers In Household Products Prelab Answers

Buffers In Household Products Prelab Give a definition of a buffer: A buffer is a solution containing either a weak acid and its salt or a weak base and its salt, which is resistant to changes in pH. (chemistry.about.com) If you...

If you want to funny

Buffers In Household Products Prelab Answers

Because cranberry juice and grapefruit had the same acid (citric acid), we compared our graph by the length of its buffer reign. Since cranberry juice had a longer buffer region (around 32mL) than grapefruit (around 26 mL) by about 6mL, this depicts that cranberry juice was a better buffer. (referring to the graphs)
