A lot of compiler the-ory has been left out, but the practical issues are covered. By the time you have completed the series, you should be able to design and build your own working compiler. It will not be the world's best, nor will it put out incredibly tight code. Your product will probably never put Borland or MicroSoft out of business.

Compiler Basics, Part 2: Building the Scanner; Have you ever thought of writing your own compiler? There are a number of good reasons to do this. It's incredibly educational and can be useful. It can solve problems and produce abstractions that can simplify some previously complex procedures.

*How To Write Your Own Compiler, Part 1: Mapping Source ...*

So why write your own compiler? WebAssembly has been causing quite a stir over the last year. So much so, that it was voted the fifth 'most loved' language in Stack Overflow's developer insights survey. An interesting result, considering that for most people WebAssembly is a compilation target, rather than a language they will use ...

Special Section: Building Your Own Compiler In Exercises 7.36–7.37, we introduced Simpletron Machine Language (SML), and you implemented a Simpletron computer simulator to execute SML programs. In Exercises 21.31–21.35, we build a compiler that converts programs written in a high-level programming language to SML.

*Special Section: Building Your Own Compiler*

LLVMlite doesn't have a implementation to a print function, so you have to define your own. So, to start, let's create a file named codegen.py that will contain the class CodeGen. This class is responsible to configure LLVM and create and save the IR code. We also declare the Print function on it.

program should contain a method that performs the first pass of the compiler and a method that performs the second pass of the compiler. Both methods can call other methods to accomplish their tasks. Make your compiler as object oriented as possible.

### *Special Section: Building Your Own Compiler | Data Structures*

Gold is a free parsing system that you can use to develop your own programming languages, scripting languages and interpreters. It uses LALR parsing, and a mix of BNF notation, character sets and regular expressions for terminals to define language grammars. Code and grammar are separated, so grammar is not tied to implementation language.

Build Your Own Lisp Learn C and build your own programming language in 1000 lines of code! If you're looking to learn C, or you've ever wondered how to build your own programming language, this is the book for you. In just a few lines of code, I'll teach you how to use C, and together, we'll start building your very own language. ...

### *Learn C • Build Your Own Lisp*

Often interpreters and compilers look like magic. And you shouldn't be comfortable with that magic. You want to demystify the process of building an interpreter and a compiler, understand how they work, and get in control of things. You want to create your own programming language or domain specific language.
