Facts about C. C was invented to write an operating system called UNIX. C is a successor of B language which was introduced around the early 1970s. The language was formalized in 1988 by the American National Standard Institute (ANSI). The UNIX OS was totally written in C. Today C is the most widely used and popular System Programming Language. Most of the state-of-the-art software have been implemented using C.

For Linux, you can write your C program in various text editors like vim, gedit or Emacs. The following steps show how to edit and compile your C program, assuming that the text editor is gedit. 1. Open Terminal (ctrl+alt+T). 2. Open a new file with .c extension (in our case name of the file is hello.c) in your favourite editor (in our case, gedit). The command is :

We recommend reading this tutorial, in the sequence listed in the left menu. C++ is an object oriented language and some concepts may be new. Take breaks when needed, and go over the examples as many times as needed.

## *C++ Tutorial*

Start with C which depending on its type, it's either null or zero. You then you add ++ to it. The result is then typical 1, a null exception, or invalid cast of some kind depending on if the language of choice is strongly typed or not etc etc. There you just learned what the line C++ would typical do in
