Coaxial cable, or coax (pronounced / ˈk oʊ . æ k s /) is a type of electrical cable consisting of an inner conductor surrounded by a concentric conducting shield, with the two separated by a dielectric (insulating material); many coaxial cables also have a protective outer sheath or jacket. The term "coaxial" refers to the inner conductor and the outer shield sharing a geometric axis.

A Coaxial cable is a special electrical cable.It is used to transmit signals.The cable is specially insulated. This makes it quite stiff. Today, coaxial cables are used for things like Cable TV.Coaxial cables can also be used for computer networks, but this became rare in the 21st century, as twisted pair cables can be used more easily.. Such cables are usually made of a conducting wire.

A coaxial cable, as a common example, is a three-dimensional linear structure. It has a wire conductor in the centre (D), a circumferential outer conductor (B), and an insulating medium called the dielectric (C) separating these two conductors. The outer conductor is usually sheathed in a protective PVC outer jacket (A).
