My family and I live in a new home that is wired for CAT5 throughout. Each bedroom has a jack with 2 coaxial outputs and 2 ethernet outlets. The living room has this as well. However, when I simply plug in an ethernet cable from the wall in my bedroom to my computer, it detects nothing. Our current network setup (through Comcast) is as follows: In the living room, out of one of those ...

User Guide - Laplink

Each connection, I presume it's wired up as Ethernet drops, should go to a central location where they terminate into a patch panel of some sort. You can use patch cables (short Ethernet cables) to connect the proper location on the patch panel to a switch. The switch is then connected to one LAN port on your router.
