James J. Heckman. Working Paper 13934. DOI 10.3386/w13934. Issue Date April 2008. This paper presents the econometric approach to causal modeling. It is motivated by policy problems. New causal parameters are defined and identified to address specific policy problems. Economists embrace a scientific approach to causality and model the preferences and choices of agents to infer subjective (agent) evaluations as well as objective outcomes.

Correlation & Causality. Words by Hannah Dewhirst. by Rethinking Economics Oxford's Max Schroder. "Correlation does not imply causation" must be the most routinely thrown-around phraseology in all of economics. Its meaning: even a systematic co-occurrence (correlation) between two (or more) observed phenomena does not grant conclusive grounds for assuming that there exists a causal relationship between these phenomena.

Rethinking Economics - Correlation & Causality

The Philosophy of Causality in Economics addresses these questions by analyzing the meaning of causal claims made by economists and the philosophical presuppositions underlying the research methods used. The book considers five key causal approaches: the regularity approach, probabilistic theories, counterfactual theories, mechanisms, and interventions and manipulability.

Hoover (2006) suggests that a useful way of classifying approaches to causation in economics might be to distinguish between approaches that emphasize structure and those that emphasise process and to add to this a distinction between approaches that adopt a priori reasoning and those that seek to infer causation from the evidence provided by data. He represented by this little table which useful identifies key works in each of the four categories.

Causation in economics - Wikipedia

The Granger causality test is a statistical hypothesis test for determining whether one time series is useful in forecasting another, first proposed in 1969. Ordinarily, regressions reflect "mere" correlations, but Clive Granger argued that causality in economics could be tested for by measuring the ability to predict the future values of a time series using prior values of another time series.
