Sound Waves Answer~~

Answer : The vibration of the medium that travels along or parallel to the direction of the wave is called a longitudinal wave. In a sound wave, the particles of the medium vibrate in the direction parallel to the direction of the propagation of disturbance. Hence, a sound wave is called a longitudinal wave.

Write down three differences between a sound wave and lightwave. Answer: Sound wave: It travels in the form of longitudinal waves. It requires a medium for its propagation. It travels through air with a speed of 332 propagation. m/s at 0°C. Lightwave: It travels in the form of a transverse wave. It does not require a medium for its propagation.
