Humans have 23 pairs of chromosomes. Only 22 of these pairs are truly homologous. The twenty-third pair, the sex chromosomes, may or may not match, depending on whether the individual is female (XX) or male (XY). The diagram below shows a generalized view of one pair of homologous chromosomes from an individual human.

Human Heredity (chapter 14) Humans have 23 pairs of chromosomes, including one pair of sex chromosomes, that follow the same patterns of Mendelian inheritance as do other organisms. Scientists study human heredity using karyotypes, pedigrees, and Punnett squares, but they also use the tools of molecular biology and bioinformatics to study DNA and gene expression.
