organisms evolve, in a Darwinian sense, during their lifetimes. Natural selection does act on individuals.

Chapter 23 - The Evolution of Populations | CourseNotes

Section 23.1: Genetic variation makes evolution possible 1. We tend to focus on genetic mutations that create phenotypic changes. Phenotypic = Observable physical and physiological traits of an organism, which are determined by its genetic makeup - Product of an inherited genotype and many environmental influences 2.

Chapter 23: The Evolution of Populations This chapter begins with the idea that we focused on as we closed the last chapter: Individuals do not evolve! Populations evolve. The Overview looks at the work of Peter and Rosemary Grant with Galápagos finches to illustrate this point, and the rest of the chapter examines the change in populations over time. As in the last

Chapter 23 – The Evolution of Populations
23.2 – The Hardy-Weinberg equation can be used to test whether a population is evolving
Although the individuals in a population must differ genetically for evolution to occur, the presence of genetic variation does not guarantee that a population will evolve. o One of the factors that cause evolution must be at work. Gene Pools and Allele Frequencies o Population – group of individuals of the same species that live in the same area and ...
