APS is primarily used for predicting chemical stability of drugs; therefore, not every test on a drug substance or drug product specification sheet or long-term stability protocol needs to be included for an APS study. Table 9 lists some common analytical tests, acceptance criteria, and typical methodologies for APS.

The metabolism of drugs occurs through basic chemical reactions as soon as the administered compound comes into contact with enzymes that are capable of altering its chemical structure. Conversely, a drug's stability after administration is due mainly to its lack of transformation by the body's enzymes.
