## **Tomato Virus Diseases: Various - Cornell University**

The most common virus disease in Iowa is tomato spotted wilt virus (TSWV), but others can occur. TSWV causes distinctive yellow ringspots on mature fruit (Figure 19). Foliage also can be affected; plants are usually stunted and tip leaves show a purplish discoloration (Figure 20). Thrips, which are small (1?

## **Tomato Diseases and Disorders - UCANR**

This destructive disease of tomato foliage, petioles and stems (fruit is not infected) is caused by the fungus *Septoria lycopersici*. Infection usually occurs on the lower leaves near the ground, after plants begin to set fruit. Numerous small, circular spots with dark borders surrounding a beige-colored center appear on the older leaves.

### **A colour atlas of tomato diseases : observation ...**

Gray leaf spot affects mainly the leaves of tomatoes, starting with the oldest leaves, although it can also infect the stems on the plant. 2 ? It does not infect the fruit, although the disease can be harbored in the seeds of the infected plant. Symptoms: Small, dark spots that can be seen on both the top and bottom surfaces of the leaves.
