Copenhagen Burnout Inventory (CBI). We developed a Korean version of the CBI, which was originally developed by Kristensen et al. [29]. The CBI addresses three sub-dimensions: personal burnout (PB), work-related burnout (WRB), and client-related burnout (CRB). The three parts of the questionnaire were designed to be applied in different domains.

Psychometric properties of the Korean version of the ...

To measure burnout, we use the seven work-related questions from the established and widely used Copenhagen Burnout Inventory (CBI). Following a successful trial, these questions are presented as optional for respondents to the national training surveys. We report responses separately to the regular NTS indicators using the method explained below.

Burnout report - GMC

The Copenhagen Burnout Inventory (CBI) is a recent burnout measure with a focus on fatigue and exhaustion. It has three factors: personal burnout, work-related burnout, and client-related burnout. This study aimed to translate the CBI into the Malay language and to validate the translated version among a group of medical students.
