galvanic cell at the anode. This method of Cathodic protection was first developed and used on a small scale in 1824 by Sir Humphrey Davy for protecting the British naval ships from corrosion.

Theory behind Impressed current cathodic protection

Bookmark File PDF

Corrosion And Cathodic

Cathodic protection is an electrical method of mitigating corrosion on metallic structures that are exposed to electrolytes such as soils and waters. Corrosion control is achieved by forcing a defined quantity of direct current to flow from auxiliary anodes, through the electrolyte, and onto the metal structure to be protected.

like iron is exposed to the environment according to electrochemical theory corrosion of metal takes place due to the formation of anodic and cathodic regions on the same metal surface or when the two metals are in contact with each other in a corrosive medium.

Bookmark File PDF

Corrosion And Cathodic

Electrochemical theory of corrosion

Cathodic protection prevents corrosion by converting all of the anodic (active) sites on the metal surface to cathodic (passive) sites by supplying electrical current (or free electrons) from an alternate source.

Usually this takes the form of galvanic anodes, which are more active than steel.
