Metalaxyl is an acylalanine fungicide with systemic function. Its chemical name is methyl N-(methoxyacetyl)-N-(2,6-xylyl)-DL-alaninate. It can be used to control *Pythium* in a number of vegetable crops, and *Phytophthora* in peas. Metalaxyl-M or Ridomil Gold are trade names for the optically pure (-) / D / R active stereoisomer, which is also known as Mefenoxam.

Metalaxyl-M is a methyl

N-(2,6-dimethylphenyl)-N-(methoxyacetyl)alaninate that is the more active R-enantiomer of metalaxyl. A systemic fungicide, it is active against phytopathogens of the order Peronosporales and is used to control Pythium in a number of vegetable crops. It has a role as an agrochemical.

Metalaxyl-M | C15H21NO4 - PubChem

The toxicology of metalaxyl-M was evaluated by the 2002 JMPR, which established a group ADI of 0-0.08 mg/kg bw for metalaxyl and metalaxyl-M. Residue and analytical aspects were considered for the first time by the present Meeting. Metalaxyl-M is the biologically active enantiomer (R-enantiomer) of the racemic compound metalaxyl.

METALAXYL-M (212)

However, metalaxyl-M (mefenoxam) degradation in tomato matrix was 2 to 6-times lower than its less active S-enantiomer. Supercritical fluid chromatography has shown itself to be a technique that provides good analytical results for chiral pesticide separation, even in complex cases.
