Diabetes: Chapter 3. Diabetic Cardiomyopathy and Oxidative ...

Diabetic cardiomyopathy is a disorder of the heart muscle in people with diabetes. It can lead to inability of the heart to circulate blood through the body effectively, a state known as heart failure, with accumulation of fluid in the lungs or legs. Most heart failure in people with diabetes results from coronary artery disease, and diabetic cardiomyopathy is only said to exist if there is no coronary artery disease to explain the heart muscle disorder.

Diabetic cardiomyopathy - Wikipedia

Diabetic cardiomyopathy is a result of damage to the heart functions. Diabetics of both types have an extremely high rate of this problem occurring. In fact, I've read that around 52% of people with type 2 have this heart problem. How does diabetes affect the heart muscle to cause cardiomyopathy?

Cardiomyopathy and Diabetes

Diabetic cardiomyopathy (CM) is characterized by abnormal ventricular function in the absence of DM-associated risk factors such as obesity, hypertension, hypercholesterolemia, or coronary artery disease. Oxidative stress plays a pivotal role in the development of diabetic CM, in which chronic hyperglycemia plays a major role.
