Container closure integrity (CCI) is one of the requirements for a sterile packaging system. For vial-based systems, the capping process is a critical step in creating and ensuring an adequate seal with acceptable CCI. Container closure integrity tests (CCITs) such as the dye ingress and the helium leak rate are two methods among many that, in the appropriate scenario, help to challenge this ...

I began my research career, completing a Cancer Research UK funded PhD under the supervision of Dr Ian Hardcastle, alongside Dr Celine Cano, Prof Roger Griffin and Prof Bernard Golding at the Northern Institute for Cancer Research, Newcastle University in 2012.

Stephanie Myers | The University of Sunderland

Abstract. Packaging is a way to protect the product and facilitate marketing and distribution to manufacturers, distributors, and consumers. The process of bringing product and package together is usually the last step of the product manufacturing operation, although assembling packages within other packages or further units often follows product packaging.
