Geological Oceanography explores the surface of the ocean and studies how the valleys, volcanoes, and mountains are formed at the surface bed. Those who pursue such courses are the ocean archaeologists who look at the evidence of millions of years and the processes that have taken place. The study then helps in understanding how the earth was formed.

As with the other disciplines of oceanography, chemical oceanographers rely on and interact with researchers from the other disciplines. One important aspect of chemical oceanography is the study of pollutants. This work may lead chemical oceanographers to the deep ocean, coastal bays and estuaries, or inland rivers, streams and lakes.
