Effect Of Phosphorus Fertilizers On Growth And ...

It is generally understood that at high soil pH levels, phosphorus is precipitated by calcium and magnesium and at low soil pH levels predominately by iron and aluminum. Thus, the historical problem with the soil chemistry of phosphorus fertilizers has been rapid fixation reactions which limit phosphorus availability. Residual phosphorus not taken up by the crop and remaining on or near the soil surface has a

rainfalls causing the fertilizers to be washed into waterways.

Agricultural run-off is a major contributor to the eutrophication of fresh water bodies. For example, in the US, about half of all the lakes are eutrophic.

Fertilizer - Wikipedia

Chemical fertilizers or inorganic fertilizers are manmade soil enhancers used to raise the level of nutrients found in soil. The natural nutrients found in the soil essential to plant growth, such as nitrogen, phosphorus and potassium, are manufactured synthetically from inorganic material and applied to soil in the form of chemical fertilizers.
