Circuit Breaker Keeps Tripping; If your circuit breaker keeps on tripping, chances are they have detected some issues in the current circuit. That is where they get the name 'circuit breakers' because they break up circuits when they sense that there is something wrong with the flow of current. Solution

The problem is that the circuits fitted during older days were not designed to power different types of electronic equipment or lighting of this era. There may be obvious signs of strains with more extension cords and single outlet paving the way to sprout power strips or lurking not seen at the back of ceilings, walls and cover plates.

When doing circuit analysis, you need to know some essential laws, electrical quantities, relationships, and theorems. Ohm ' s law is a key device equation that relates current, voltage, and resistance. Using Kirchhoff ' s laws, you can simplify a network of resistors using a single equivalent resistor. You can also do the same type of calculation to obtain [...]
