Conditional probability-2. Formally the conditional probability is given as  $p(A|B) = p(A \cap B) / p(B)$  Notice how this works for rolling a 3. Since rolling a 3 and rolling an odd number are dependent, the probability of rolling a 3 AND odd is the same as rolling a 3.  $p(3 \text{ and odd}) = p(3) \cdot p(\text{odd}) = \frac{1}{6} \cdot \frac{1}{2} = \frac{1}{12}$ .

This book covers in single volume the essential of probability and statistics and certain of their engineering applications. Many undergraduate engineering curricula include a required course in probability. It is important that this course include not only the elements of probability and its engineering applications, but statistics as well.

It follows the typical outline of an introductory course in general statistics: first descriptive statistics-the collecting (Chapters 2 and 3), organizing (Chapter 4), graphing (Chapter 5), and describing (Chapters 6 and 7) of numerical data; then probability theory (Chapters 8 through 1 2) and sampling theory (Chapter 13); and finally, the estimation and hypothesis-testing techniques of inferential statistics (Chapters 14 through 20).

Description: Reviews (0) This ebook, Elements of Probability and Statistics: An Introduction to Probability with de Finetti's Approach and to Bayesian Statistics (PDF) provides an introduction to elementary probability and to Bayesian statistics using de Finetti's subjectivist approach. One of the great features of this approach is that it does not require the introduction of sample space - a non-intrinsic concept that makes the treatment of elementary probability unnecessarily ...
