Rules: 4.2.a. There shall always be precisely one header file for each source file and they shall always have the same root name. 4.2.b. Each header file shall contain a preprocessor guard against multiple inclusion, as shown in the example below. 6 4.2.c. The header file shall identify only the procedures, constants, and data types (via prototypes or macros, #define, and typedefs ...

## *4.2 Header Files | Barr Group*

This creates a problem when linking to C code as C function names are not mangled. When calling a C function from C++ the function name will be mangled unless you turn it off. Name mangling is turned off with the extern "C" syntax. If you want to create a C function in C++ you must wrap it with the above syntax.
