device that enables connectivity between an (embedded) DisplayPort (eDP) source and LVDS display panel. It processes the incoming DisplayPort (DP) stream, performs DP to LVDS protocol conversion and transmits processed stream in LVDS format. PTN3460 has two high-speed ports: Receive port facing DP Source (for example, CPU/GPU/chip set), Transmit port facing the LVDS receiver (for example, LVDS display panel controller).

Embedded DisplayPort is a high performance audio/visual interface developed through the personal computer industry which allows displays to display in 4k and beyond. eDP cables have become a popular replacement for LVDS display cables which have been the standard since the mid 1990s. DisplayPort itself continues to gain momentum and is now moving onto tablets and phones as a supporting feature of the new USB-C connector in the form of "DisplayPort Alt Mode." Like DisplayPort, eDP also offers display resolutions beyond 4K. Designed to replace the internal LVDS display interface developed in the mid 1990s, eDP is used in virtually all new computers with an internal display, including laptops, all-in-ones, and many high-end, higher-resolution tablets.
