~~Endoscopy Procedure for Upper GI: Purpose, Results, GERD ...~~

Upper GI endoscopy is a procedure in which a doctor uses an endoscope—a flexible tube with a camera—to see the lining of your upper GI tract. A gastroenterologist, surgeon, or other trained health care professional performs the procedure, most often while you receive light sedation to help you relax.

~~Upper GI Endoscopy | NIDDK~~

It is also often called just upper endoscopy, upper GI, or even just endoscopy; because EGD is the most commonly performed type of endoscopy, the ambiguous term endoscopy is sometimes informally used to refer to EGD by default. The term gastroscopy literally focuses on the stomach alone, but in practice the usage overlaps.

~~Esophagogastroduodenoscopy - Wikipedia~~

An upper endoscopy, sometimes referred to as esophagogastroduodenoscopy or EGD, is a type of endoscopy performed on the upper GI tract. This procedure is considered the golden standard for identifying certain gastrointestinal disorders such as celiac disease.

~~A Complete Overview of Upper GI Endoscopy~~

The upper gastrointestinal (GI) endoscopy can also be named a gastroscopy. It is a method that uses a supple endoscope to inspect the oesophagus, stomach and duodenum to look for any issues or abnormalities (see Figure 1). What are the alternative forms of examination?

~~Upper GI Endoscopy - Parkside Hospital~~

Endoscopy for acute UGI bleed is recommended within 24 hours by an International Consensus Group. The optimal timing within the first 24 hours is unclear. Prior work has looked at immediately following admission vs. 1-2 days and 6 hours vs 48 hours. No differences in mortality or re-bleeding were found.

~~Timing of Endoscopy for Acute Upper Gastrointestinal ...~~

An upper endoscopy is also called an upper gastrointestinal (GI) endoscopy, or an esophagogastroduodenoscopy (EGD). A scope (thin, flexible tube with a light and camera) is used to examine the walls of your upper digestive tract. The upper digestive tract includes the esophagus, stomach, and duodenum

(first part of the small intestine).

~~Upper Endoscopy — What You Need to Know~~

Endoscopy has several names, depending on which portion of your digestive tract your doctor seeks to inspect. Upper GI endoscopy (EGD): This procedure enables the examination of the esophagus, stomach and the upper small bowel called duodenum.

~~GI Endoscopy Procedure, Preparation, Side Effects & Risks~~

A gastroscopy is a procedure where a thin, flexible tube called an endoscope is used to look inside the oesophagus (gullet), stomach and first part of the small intestine (duodenum). It's also sometimes referred to as an upper gastrointestinal endoscopy. The endoscope has a light and a camera at one end.

~~Gastroscopy — NHS~~

An endoscopy is a procedure where organs inside your body are looked at using an instrument called an endoscope. An endoscope is a long, thin, flexible tube that has a light and camera at one end. Images of the inside of your body are shown on a television screen.
