Metallurgical & Materials Engineering encompasses three inter-related engineering disciplines: mineral processing, extractive (or process) metallurgy, and materials science and engineering. While remaining true to its School of Mines heritage, the program curriculum features a strong core of fundamental engineering, process, and materials courses in addition to fulfilling Montana Tech's general education requirements.

Engineering Materials And Metallurgy By Srinivasan Pdf ...

Metallurgical and materials engineering plays a role in all manufacturing processes which convert raw materials into useful products adapted to human needs. The primary goal of the Metallurgical and Materials Engineering program is to provide undergraduates with a fundamental knowledge base associated with materials-processing, their properties, and their selection and application.

Metallurgy is a sub-domain of materials science and engineering that studies the chemical behaviour of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys .

Metallurgy encompasses both the science and the technology of metals. That is, the way in which science is applied to the production of metals, and the engineering of metal components used in products for both consumers and manufacturers.

Materials and Metallurgical Engineering  
Materials science is a syncretic discipline hybridizing metallurgy, ceramics, solid-state physics, and chemistry. It is the first example of a new academic discipline emerging by fusion rather than fission. Many of the most pressing scientific problems humans currently face are due to the limits of available materials and how they are used.
