Abstract. Abstract Benign prostatic hyperplasia (BPH) is a common cause of morbidity among older men. Primary care physicians need to develop expertise in its management. The causes of BPH are unknown; aging and the presence of male androgens are the dominant risk factors. Obtaining a medical history is a key step in assessing whether lower urinary tract symptoms are due to BPH or to some other process.

Abstract. Benign prostatic hyperplasia (BPH) and associated lower urinary tract symptoms (LUTS) commonly affect older men. Age-related changes associated with metabolic disturbances, changes in hormone balance, and chronic inflammation may cause BPH development. The diagnosis of BPH hinges on a thorough medical history and focused physical examination, with attention to other conditions that may be causing LUTS.
