For a lot of enterprise architecture work a simple process name, from which you can associate things, e.g. applications, is good enough. Only get into flows if it's useful to do so, e.g. if you are looking at process automation, and only do it for those areas of interest, don't do flows for everything unless you really have to.

Overview. Enterprise modelling is the process of building models of whole or part of an enterprise with process models, data models, resource models and or new ontologies etc. It is based on knowledge about the enterprise, previous models and/or reference models as well as domain ontologies using model representation languages. An enterprise in general is a unit of economic organization or ...
