Functions are predefined formulas that you can use to make data analysis a bit easier within the Microsoft Excel framework. Functions use specific values, called arguments, to calculate a variety of things, from simple sums and averages to more complicated loan payments.

[Excel Formulas and Functions For Dummies: Amazon.co.uk ...](#)

Working in Excel, you will hear the words "formula" and "function" used frequently, sometimes interchangeably. They are closely related, but not exactly the same. Technically, a formula is any expression that begins with an equals sign (=). A function, on the other hand, is a formula with a special name and purpose.

[Excel formulas and functions | Exceljet](#)

FUNCTION IN EXCEL is a predefined formula that is used for specific values in a particular order. Function is used for quick tasks like finding the sum, count, average, maximum value, and minimum values for a range of cells. For example, cell A3 below contains the SUM function which calculates the sum of the range A1:A2.

[Excel Formulas & Functions: Learn with Basic EXAMPLES](#)

A formula is an expression which calculates the value of a cell. Functions are predefined formulas and are already available in Excel. For example, cell A3 below contains a formula which adds the value of cell A2 to the value of cell A1. For example, cell A3 below contains the SUM function which calculates the sum of the range A1:A2.

[Formulas and Functions in Excel - Easy Excel Tutorial](#)

Typing a formula in a cell or the formula bar is the most straightforward method of inserting basic Excel formulas. The process usually starts by typing an equal sign, followed by the name of an Excel function. Excel is quite intelligent in that when you start typing the name of the function, a pop-up function hint will show.

[Basic Excel Formulas - List of Important Formulas for ...](#)

Summary. The Excel AND function is a logical function used to require more than one condition at the same time. AND returns either TRUE or FALSE. To test if a number in A1 is greater than zero and less than 10, use =AND (A1>0,A1<10). The AND function can be used as the logical test inside the IF function to avoid extra nested IFs, and can be combined with the OR function.

[How to use the Excel AND function | Exceljet](#)

There are two ways to enter formulas in Excel. Either type the formula in the Formula Bar or use the Function Arguments dialog box. The dialog box takes care of the syntax such as placing comma separators between arguments and surrounding text entries in quotation marks. The steps used to enter the IF/OR formula in cell B4 are as follows:

[How to Use the AND, OR, and IF Functions in Excel](#)

For example, =A2+A2+A3+A4 is a formula that adds up the values in cells A2 through A4. Function is a predefined formula already available in Excel. Functions perform specific calculations in a particular order based on the specified values, called arguments, or parameters.

[Basic Excel formulas & functions with examples](#)

IF OR AND formula in Excel In Excel IF formulas, you are not limited to using only one logical function. To check various combinations of multiple conditions, you are free to combine the IF, AND, OR and other functions to run the required logical tests. Here is an example of IF AND OR formula that tests a couple of OR conditions within AND.
